

Each dot is a country. Only data for a country's most recent elections are shown. **SLB** is Solomon Islands (2014), **PNG** is Papua New Guinea (2017). The line of best fit on the chart plots the average relationship between GDP and electoral quality. It shows that, on average, wealthier countries have better elections.

Countries above the line, like Solomon Islands, hold better than average elections for their level of GDP.

Data are from the Electoral Integrity Project <https://www.electoralintegrityproject.com/> and were accessed in 2018.
