Note: Ban Ki Moon wrong on water MDG

By Stephen Howes and Jonathan Pryke 12 August 2012

Earlier this year the UN Secretary General (SG) reminded us in his preface to this <u>report</u> of the MDG target for drinking water: "reducing by half the proportion of people without sustainable access to safe drinking water". And then he proudly announced "that, as of 2010, the target for drinking water has been met."

Unfortunately, this is wrong or, at best, misleading. As Roger Harrabin explains here, there is no reliable data on safe drinking water. The UN <u>report</u> [pdf] for which the SG wrote the preface shows that it is in fact the proportion of people without *improved* water supply which has fallen in half. *Improved* and *safe* are very different. As a recent Global Water Forum <u>post</u> explains, water is often piped but untreated.

The UN report doesn't hide the fact that it is measuring changes in improved rather than safe water. Why it still talks about meeting a safe water target, and gives the SG a misleading preface to sign is a mystery. And water is not the only MDG to be plagued by data problems, as recently argued in <u>this</u> Devpolicy post, progress towards the health MDGs is also immeasurable.

Stephen Howes is Director of the <u>Development Policy Centre</u>. Jonathan Pryke is a Researcher at the Centre.

About the author/s

Stephen Howes

Stephen Howes is Director of the Development Policy Centre and Professor of Economics at the Crawford School of Public Policy at The Australian National University.

Jonathan Pryke

Jonathan Pryke worked at the Development Policy Centre from 2011, and left in mid-2015 to join the Lowy Institute, where he is now Director of the Pacific Islands Program. He has a

DEVPOLICYBLOG

Master of Public Policy/Master of Diplomacy from Crawford School of Public Policy and the College of Diplomacy, ANU.
